

Scratch DJ Academy MIX! Version 1.2 – Test for Audio Playback

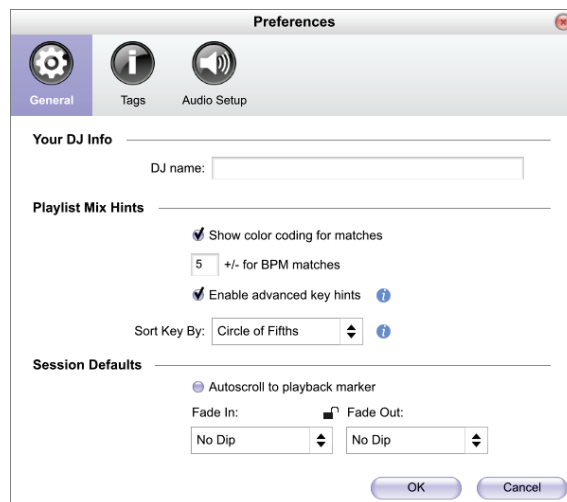

1. First make sure that your playback volume is not all the way down. The volume button is at the bottom of the application. It is best to keep the level at 0 dB when testing for audio output.

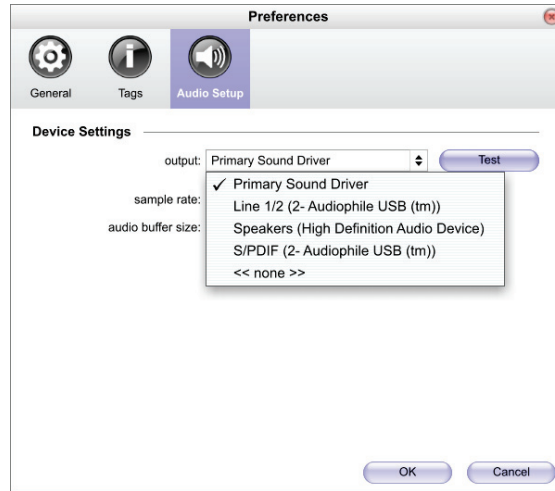

2. Select “Preferences” from the Edit Menu.

3. Preference Window will pop up. Select Audio Preferences Tab.

- Under Device Settings, use the “output” drop down to select your desired output device. Use the “Test” button to play a test tone over the output device.

If you still do not hear audio, set the output device to “none”. Then set it back to your desired output device. This resets the state of the audio preference internally. Again, try the “Test” button.

- Click OK to save your settings. Double-click any song in your library to test for audio playback.

Please contact support@scratch.com if you have any additional questions.
